1. What the Training Module does

A single place to manage the courses your candidates take and the certificates they earn — past, current, and future.

Three views, one purpose

- **Catalogue** — admins maintain the list of courses (name, code, provider, duration).
- **Per-candidate history** — every candidate's profile shows the training they've done, are doing, or are scheduled to do.
- **Cross-candidate operations** — recruiters get a global view of enrolments and a bulk-enrol flow for cohorts.

Status lifecycle

Every enrolment has one of five statuses. Move freely between them as situations change.

STATUS	MEANS
enrolled	Booked but hasn't started.
in progress	Currently undertaking the course.
completed	Finished. Certificate number can be recorded.
withdrawn	Candidate withdrew before completion.
failed	Did not pass.

Behind the scenes: while a candidate has an *in progress* enrolment, the start/end dates show up as the "active training" pill on their profile automatically — no extra step needed.

2. The training catalogue (admins)

Maintained at `/admin/trainings`. Visible to recruiters as read-only; admins and recruiter-admins can add, edit, and deactivate.

Adding a course

- 1 Click the dark **+ New Training** button in the top-right of the catalogue.
- 2 Fill in **Name** (required). Tip: keep names short and readable — they appear in dropdowns all over the platform.
- 3 Optionally set **Code** (e.g. `CHC33015` for a TAFE course), **Duration (days)** (drives the auto-suggested end date on cohort enrol), **Provider**, and a **Description**.
- 4 Click **Create**. The course is immediately available everywhere.

Editing or deactivating

Click the pencil icon on any row. Use the **Mark inactive** link inside the edit dialog to hide a course from new enrolment flows — existing enrolment records keep working. Inactive courses don't appear in the catalogue picker on the Cohort enrol page.

Search and filter

The search box matches both the **name** and the **code** (case-insensitive). Toggle **Active only** off to see deactivated courses.

Why can't I delete a course? Once a course has been used in an enrolment, hard-deleting it would lose history. We deactivate instead — the course disappears from the picker but the history of who took it stays intact.

Suggested starter catalogue

A ready-made list to populate your environment:

NAME	CODE	DURATION
Cert III in Aged Care	CHC33015	180 days
Cert III in Individual Support	CHC33021	180 days
White Card	CPCWHS1001	1 day
First Aid Certificate	HLTAID011	1 day

NAME	CODE	DURATION
Forklift Licence	TLILIC0003	5 days
Food Handling	SITXFSA005	1 day
Manual Handling	HLTWHS005	1 day
Responsible Service of Alcohol	SITHFAB021	1 day

3. Enrolling one candidate

When you need to add a single training record to a single candidate — by far the most common task.

Where to find it

Open any candidate from **Candidates**. Scroll down past Application History and you'll find the **Training history** panel.

Adding an enrolment

- 1 Click the dark **+ Enrol** button on the right of the panel header.
- 2 **Course *** — pick from the catalogue dropdown (only active courses appear).
- 3 **Status** — defaults to *enrolled*. Choose *in progress* if the candidate is already studying; the dates immediately flow to their profile's "active training" indicator.
- 4 **Start date / End date** — both optional, but enter end if known. The system rejects an end date that's earlier than start.
- 5 If **Status = Completed**, a **Certificate #** field appears. Fill it in to record the certificate number.
- 6 Click **Enrol**. The row appears immediately in the candidate's history table.

Editing or removing an enrolment

Click **Edit** on any row in the history table. The same dialog opens, pre-filled. Use it to update the status (e.g. move from *enrolled* to *in progress*, or to *completed*), correct a date, or add a certificate number. The **Remove** link at the bottom of the dialog deletes the enrolment entirely — useful for fixing mistakes.

Did you know? The status badge colour in the history table matches the same colours used elsewhere in the platform — grey for enrolled, blue for in progress, green for completed, amber for withdrawn, red for failed. Spot a candidate's situation at a glance.

4. The Training page — Enrolments tab

A cross-candidate operational view. Access via the **Training** entry in the main nav (between Candidates and Placements).

What you see first

Five summary chips at the top show how many enrolments are in each status — driven by your active filters (excluding the status filter itself). Below that, a filter bar; below that, a paginated table of every enrolment in the system.

The filter bar

CONTROL	USE IT FOR
Status chips	Click one or more to narrow by status. Tap again to deselect.
All courses	Limit to one course (handy when reviewing who took a specific qualification).
All providers	Limit to one training provider.
From / To	Date range on the enrolment's start date.
Search candidate name	Case-insensitive partial match.

A **Clear filters** link appears when anything is set.

The table

Each row shows the candidate, the course, the provider, the status, dates, and a certificate number (if recorded). The **Open** link on the right takes you straight to the candidate's full profile — useful when reviewing a list of completions before sending out paperwork.

Pagination

The page shows 25 enrolments at a time. Use the Prev / Next buttons at the bottom of the table. The total count is always visible.

Empty list? Either your filter is too tight (click *Clear filters*) or there genuinely are no enrolments yet. New deployments start with an empty list — start by creating courses in the catalogue and enrolling at least one candidate.

5. Cohort enrolment — bulk enrol

When a group of candidates is doing the same course at the same time, enrolling them one by one is busywork. The Cohort enrol tab does the whole group in one transaction.

Three steps, one page

On the Training page, click the **Cohort enrol** tab. The form is a single inline flow — each step unlocks the next.

- 1 **Pick a course.** The selected course card shows the name, code, provider and the nominal duration in days.
- 2 **Set dates.** Enter a start date. If the course has a duration set, the end date auto-fills (e.g. 180-day Cert III sets end date 180 days later). Both dates are editable.
- 3 **Choose candidates.** Search by name, tick the checkbox next to each candidate. Your running selection is in the sticky right-hand panel — remove anyone with the x icon.

Submitting

The sticky footer at the bottom of the page shows how many candidates are selected. When at least one is picked, the **Enrol N candidates** button activates. Click it. A short pause, then a results dialog:

- **Created N enrolments** — how many succeeded.
- **Skipped** (collapsible) — any candidates who already had an active enrolment in this course are listed with the reason. They're left alone; their existing record isn't disturbed.

Skip logic

A candidate is skipped when they already hold an *enrolled* or *in progress* record for the same course. This prevents accidental double-booking. Once their previous enrolment moves to *completed*, *withdrawn*, or *failed*, you can re-enrol them in a future cohort.

"View enrolments" handoff

After a successful bulk enrol, click **View enrolments** in the results dialog. You're switched to the Enrolments tab with the course and start date pre-filtered — you can immediately see the new cohort in context.

All-or-nothing transaction: if one insert fails (e.g. an invalid candidate ID), the entire batch is rolled back. You'll get an error message instead of partial creation. Try a smaller batch to isolate the cause.

6. Permissions reference

Who can do what.

ACTION	ADMIN	RECRUITER ADMIN	RECRUITER	PROVIDER
View training catalogue (/admin/trainings)	 Read/write	 Read/write	—	—
Create / edit catalogue courses			—	—
View Training page (/training)				—
Enrol single candidate (Candidate Detail)				—
Edit / remove an enrolment				—
Cohort enrol (bulk)				—
Hard-delete an enrolment record		—	—	—

Recruiters see the same UI as admins but the **+ New Training** button and catalogue edit controls are hidden — the same pattern used everywhere else in the platform.

7. Tips & common gotchas

"My candidate doesn't appear in the Cohort enrol picker"

The picker shows every active candidate. If yours is missing, check: (a) did the candidate get deleted? (b) is your search term spelled correctly? (c) try paging — only 20 candidates per page.

"The Enrolments table is empty even after I enrolled someone"

You probably have a filter active. Click **Clear filters**. If still empty, the enrolment may have saved against a different candidate — check the source candidate's profile.

"The cohort enrol skipped half my selection"

Those candidates already have an *enrolled* or *in progress* record for the same course. Click the **N skipped — see why** details panel for the full list. To re-enrol them, first move their existing record to *completed* / *withdrawn* / *failed*.

"Why did the active-training pill on my candidate disappear?"

That pill is wired to their most recent *in progress* enrolment. The moment you flip the status to *completed* (or anything else), the pill clears. To restore it, set a different enrolment to *in progress*.

"I can't delete a course"

Intentional. Use **Mark inactive** in the edit dialog — it hides the course from new pickers but keeps history intact. A future admin-only hard-delete is on the roadmap if needed.

"Auto-suggested end date is wrong"

End date is auto-filled as *start date + course duration days*. If the duration on the catalogue entry is wrong (or missing), the suggestion will be too. Edit the course in the catalogue — future enrolments use the corrected value.

Where to report bugs

Take a screenshot of what you're seeing and message the dev team with the candidate ID or training ID (visible in the URL when you open detail pages). The faster we get an ID, the faster we can reproduce.
